SUBJECT: Port Facility Maintenance Dredging, Tennessee River Mile 297.5, Left Bank.

Marine Terminals has announced they will be conducting maintenance dredging in the vicinity of the NUCOR Steel port facility located at the subject location. Work will begin on Monday, 27 March 2006 and is scheduled to be completed by the first of May 2006. Work will be conducted during daylight hours.

Dredging will be conducted by a barge-mounted hydraulic excavator. Dredged material will be barged to a location along the shoreline where it will be transferred to trucks for offsite placement. During non-working hours, the floating plant will be moored dockside at NUCOR or in the fleeting area.

While this activity is removed from the main navigation channel and is not expected to interfere with passage of traffic, vessel operators making deliveries or pick-ups are requested to use caution when approaching this facility.

FOR THE DISTRICT ENGINEER:
